Sequence 2, Application US/09728721
Patent No. US20020061845A1
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Bertin, John
TITLE OF INVENTION: NOVEL MOLECULES OF THE CARD-RELATED PROTEIN FAMILY AND USES THERE
FILE REFERENCE: 07334-124001
CURRENT PAPLICATION NUMBER: US/09/728,721
CURRENT FILING DATE: 2000-12-01
PRIOR APPLICATION NUMBER: 09/340,620
PRIOR APPLICATION NUMBER: US 09/207,359
PRIOR FILING DATE: 1998-12-08
PRIOR FILING DATE: 1998-06-17
PRIOR FILING DATE: 1998-06-17
PRIOR FILING DATE: 1998-06-17
PRIOR FILING DATE: 1998-06-05

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
CASP-8-mediated apoptosis. Activates NP-kappaB (By similarity).

-!- FUNCTION: Activates pro-caspase-1 and pro-caspase-8. Potentiates CASP-8-mediated apoptosis. Activates NP-kappaB (By similarity).
-!- CATALYTIC ACTIVITY: AIP + a protein = ADP + a phosphoprotein.
-!- SUBUNIT: Binds to CFLAR/CLARP and CASP1 via their CARD domains.
-!- SUBUNIT: Binds to CFLAR/CLARP and CASP1 via their CARD domains.
TRAF6. May be a component of both the TNFRSF1A and TNRFSF5/CD40 receptor complex (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (Probable).
-!- FUM: Autophosphorylated (By similarity).
-!- SIMILARITY: Belongs to the Ser/Thr family of protein kinases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ..

This CDS clone is a part of a collection of human full-length
expression clones generated by Harvard Institute of Proteomics.
Each CDS has been cloned without stop-codon (to allow fusion with
C-terminal tag). The CDS has been directionally cloned using BD
In-Fusion (TM) cloning system between the Sall and HindIII sites of
the PDNR-Dual vector. Additional sequences in the clone: 'ACC'
sequence; 'GG' after last codon and before HindIII site to maintain
                                                                                                                                                                                                                                               1359
                                                                                                                                                                                                                                                                                                                                                                            1419
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1479

RED human cDNA sequencing project supported by Ministry of
BConomy, Trade and Industry of Japan; cDNA full insert sequencing:
Research Association for Biotechnology; cDNA library construction:
Institute of Medical Science, University of Tokyo, Laboratory of
Genome Structure, Human Genome Center; cDNA 5'- & 3'-end one pass
sequencing and clone selection: Helix Research Institute (supported
hw. Janan Key Technology Center etc.).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo sapiens cDNA FLJ90732 fis, clone PLACE1010081, highly similar to Homo sapiens serine/threonine kinase RICK (RICK) mRNA. Compositions for identifying apoptosis signaling pathway inhibitors useful for treating diseases.

Claim 6; Page; 93pp; English.

This sequence is a fragment of the human RICK (RIP-like interacting CLARP kinase) protein of the invention. RICK acts as a positive regulator of apoptosis, potentiating apoptosis induced by caspase-8 and caspase-10 during. CD95 signalling. The invention provides methods for identifying apoptosis signalling pathway inhibitors and activators, and methods and compositions for screening compounds which will modulate the interactions of the various compositions identified ARC, RICK, and the CIDE family of activators (CIDE-A, CIDE-B and DREP-1). RICK is useful in screening assays for agents, useful in the diagnosis or treatment of disease associated with excess cell growth and dysregulation of apoptosis. Complexes containing RICK and CLARP can be used in drug

Claim 6; Page; 93pp; English

```
apoptosis. Overexpression of ARC in an in vitto cell system can be used to identify inhibitors of the enzymatic activity of caspase-8.

Identification of ARC-like inhibitory compounds may be useful for gene therapy treatment of disease with increased cell death in muscle tissue and cardiac disorders. Therapeutic compositions of CIDEs can be used to treat e.g. cancer, AIDS; neurodegenerative disorders, aplastic anaemia, ischaemic injury, and toxin-induced liver disease. AntiRICK antibodies can be used as reagents for the preparation or affinity chromatography media, and for dispnositically measuring RICK levels. A specific inhibitor of an essential step in the blochemistry of apoptosis is needed. RICK interaction with intracellular factors such as CLARP and FADD appears to be essential for apoptosis, inhibitors of RICK binding to intracellular apoptosis factors are potential drug candidates. Note: This sequence was created using information given in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                              116
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         LSRKAQDCYFMKLHHCPGNHSWDSTISGSQRAAFCDHKTTPCSSAIINPLSTAGNSERLQ 176

This sequence is a fragment of the human RICK (RIP-like interacting CLARP kinase) protein of the invention. RICK acts as a positive regulator of thase) protein of the invention. RICK acts as a positive regulator of apoptosis, potentiating apoptosis induced by caspase-8 and caspase-10 during CD95 signalling. The invention provides methods for identifying compositions for screening compounds which will modulate the interactions of the various compositions identified. RICK, and the CIDE family of activators (CDE-A, CIDE-B and DREP-1). RICK, and the CIDE family of assays for agents, useful in the diagnosis, prognosis or treatment of disease associated with excess cell growth and dysregulation of capptosis. Complexes containing RICK and CLARP can be used in drug screening assays to identify inhibitor molecules blocking CD95-mediated apoptosis. Overexpression of ARC in an in vittro cell system can be used to containing RICK and CLARP can be used in drug screening assays to identify inhibitory compounds may be useful for gene therapy treatment of disease with increased cell dath in muscle tissue and cardiac disorders. Therapoutic compositions of CIDEs can be used to treat e.g. cancer, AIDS, neurodegenerative disorders, aplastic anaemia, ischaemic injury, and toxin-induced liver disease. AntiRICK antibodies can be used as reagents for the preparation or affinity chromatography media, and for diagnositically, measuring RICK levels. A specific inhibitor of an essential step in the biochemistry of apoptosis is needed. RICK interaction with intracellular factors such as CLARP and FADD appears to the essential for apoptosis, inhibitors of RICK binding to intracellular apoptosis factors are potential area captors. Note: This sequence was created using information given in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                310
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           371 PGIAQQWIQSKREDIVNQWTEACLNQSLDALISRDLIMKEDYELVSTKPTRTSKVRQLLD 430
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   124

New B1 protein regulates cell death and cell survival pathways - derivatives, DNA and antibodies, also regulate intracellular inflammation ; for treating AIDS, cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes the isolation of a novel human B1 protein which can interact with, intracellular mediators or modulators of inflammation, cell death and/or cell survival pathways, directly or indirectly. Cells can be modulated or mediated in inflammation, cell death or cell survival pathways or another intracellular signalling activity using B1. Conditions such as AIDS and cancer can be treated using B1. Antibodies, oligonucleotides and ribozymes can also be used to regulate the above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               373 LSRKAQDCYFMKLHHCPGNHSWDSTISGSQRAAFCDHKTTPCSSAIINPLSTAGNSERLQ 432

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence is the human RICK (RIP-like interacting CLARP kinase)

Co fapoptosis, potentiating apoptosis induced by caspase-8 and caspase-10

during CD95 signalling. The invention provides methods for identifying

apoptosis signalling pathway inhibitors and activators, and methods and

compositions for screening compounds which will modulate the interactions

CC activators (CIDE-A, CIDE-B and DRIP-1). RICK, and the CIDE family of

activators (CIDE-A, CIDE-B and DRIP-1). RICK is useful in screening

compositions identified: ARC, RICK, and the CIDE family of

activators (CIDE-A, CIDE-B and DRIP-1). RICK is useful in screening

compositions complexes containing RICK and CLARP can be used in drug

screening assays for agents, useful in the diagnosis, prognosis or treatment of

apoptosis. Complexes containing RICK and CLARP can be used in drug

screening assays to identify inhibitor molecules blocking CD95-mediated

co apoptosis. Overexpression of ARC in an in vitro cell system can be used

co identification of ARC-like inhibitory compounds may be useful for gene

therapy treatment of disease with increased cell death in muscle tissue

co therapy treatment of disease with increased cell death in muscle tissue

cot therapy treatment of disease with increased can be used to

treat e.g. cancer, AIDS, neurodegenerative disorders, aplastic anaemia,

cot ischaemic injury, and toxin-induced liver disease. AntirRICK antibodies

con be used as reagents for the preparation or affinity chromatography

media, and for diagnostically measuring RICK levels. A specific inhibitor

cot an essential step in the blochemistry of apoptosis is needed. RICK

interaction with intracellular factors such as CLARP and FADD appears to

be essential for apoptosis, inhibitors of RICK binding to intracellular

copposis factors are potential drug candidates

                                                                                                                                                                                        AAY68769-95 and AAY68797-99 represent human phosphorylation effectors (PHSP), designated PHSP1-PHSP31 (the protein sequence for PHSP28 is not given in the specification). The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing with increased PHSP expression/activity PHSP with increased PHSP expression/activity

for treating and/or preventing cytomegalovirus (CMV) infection and/or related diseases. The method of the invention comprises contacting a test compound with at least one of the cellular kinases RICK, RIP, NCK-Interacting kinase, MKK3 and SRPK-2 and detecting any change in kinase activity. The method of the invention can be used to treat and/or prevent CMV infections and related diseases. Oligonucleotides that can detect the specified kinases can also be used for diagnosis of infection. The present amino acid sequence represents the human cellular kinase RICK protein of the invention, as described above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          433 PGIAQQWIQSKREDIVNQMTEACLNQSLDALLSRDLIMKEDYELVSTKPTRTSKVRQLLD 492
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New antisense oligonucleotide that targets regions of a nucleic acid
encoding human receptor interacting protein (RIP)2, for treating diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PGIAQQWIQSKREDIVNQMTEACLNQSLDALLSRDLIMKEDYELVSTKPTRTSKVRQLLD 184
                                                                                               Identifying agents for treatment or prevention of cytomegalovirus infection, comprises contacting test compound with cellular kinase and detecting change in cellular kinase activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           313 KLQSVSSAIHLCDKKKMELSLNIPVNHGPQEESCGSSQLHENSGSPETSRSLPAPQDNDF

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       clones. 830 cDNA molecule Ferrociding a human protein have been isolated and nucleotide sequences of 5' and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA molecules have been determined. Primers for synthesised by the cDNA molecules have for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention. Note: The sequence data for this patent did form part of the printed specification, but was obtained in CD-ROM format directly from EPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               372

                                           The invention relates to antisense compounds targetted to a nucleic acid encoding human receptor interacting protein (RIP)2 to inhibit its expression. Antisense compounds are used for treating diseases associated with RIP2 expression. They are also useful in antisense gene therapy. The present sequence is human RIP2 protein

antilinflammatory; antilatering distributions attributed antilinflammatory; antilatering dermatological; antilatering dermatological; antiporotact; and polymetries and polymetries and diagnosing pathological conditions. CC ameliorating medical conditions and diagnosing pathological conditions. CC polymetocotides, polymetries, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune cells, to treat disorders of haematopoletic cells, autoimmune disorders, allergic reactions, graft versus host disease and organ rejection, modulate haemostatic or thrombolytic activity, modulate inflammation, cancers, cardiovascular disorders, neurological disease and bacterial or viral infections. The peptides, nucleotides, antibodies, agonists and antagonists may be also be used in drug screens. AAC78449 to AAC78457 and AAB42240 represent sequences used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             436
